ADVANCING YOUR SUCCESS...

SECURITY:

BORDER, INFRASTRUCTURE, PERSONNEL AND CYBER

Regional political, economic and security challenges require governments and companies to forge strong paths towards security, prosperity and freedom, internally and in partnership with the global community. Border security threats, political unrest, asymmetric environments and rapidly evolving challenges require building and drawing on critical capabilities to anticipate and respond effectively.

The Security Team at The SPECTRUM Group delivers a continuum of performance-tested, robust security capabilities to support governments, corporations and their regional economic and security partners, including:

- Initial and continual threat, vulnerability and risk assessments and mitigation
- Border security and security personnel capability development
- Secure infrastructure assessment, design and retrofitting
- Cyber and insider threat mitigation
- Application, network, communication and cloud security support

The SPECTRUM Security Team provides secure, bespoke solutions, offering full lifecycle services and individual capabilities tailored to our global clients' specific economic, political and security challenges, including in high-risk areas around the world. We draw on our global network of contacts and experienced personnel to assess, deliver and implement gold-standard and cost-effective solutions to our clients' present and future challenges.

Our Team's expertise is built on successful careers in U.S. and global law enforcement and homeland security programs, U.S. military and defense operational security sectors, cyber security, the intelligence community (IC), and IT and insider threat arenas. We also have strong partnerships with security and logistics providers, secure infrastructure engineering and construction project managers, IT and communications providers, and international visa and travel documentation partners. Together, our Team provides the access, insights and experience needed to enable our clients to succeed in their security objectives.

Our company is founded on Expertise, Experience and Integrity. We help our clients implement programs and meet their goals ethically, effectively and using best practices. Although we work in some of the most challenging, high-threat and underdeveloped regions in the world, we are firmly committed to ensuring our clients' requirements and operations are successfully executed – and we have the experience and expertise to deliver our clients that assurance.

DEVELOPING SOLUTIONS

Significant investments in security solutions require initial and ongoing expertise and assessments to determine the best path forward, identify risks and solutions, and fully understand opportunity and challenges.

We understand that integrated approaches are required to build all dimensions of security capabilities. We help clients develop the critical and diverse security elements that best meet their needs, including law enforcement, personnel, facilities, and technology.

We provide customized solutions for our U.S. and international clients, with a mission of delivering successful programs to meet the dynamic challenges of the ever-changing global security environment.

Our deep understanding of the issues driving border, infrastructure, personnel and cyber security challenges comes from our experience successfully addressing conventional and asymmetrical threats with proven mitigation solutions as former flag officers, security professionals, and senior executives in law enforcement, industry, and the intelligence community.

SECURING BORDERS

Border security, key to political and economic stability and growth, spans global government, military and commercial enterprises. Secure borders require expert assessment, skilled mobile and static security personnel, secure logistics support, and secure communication and intelligence tools.

Our Team helps clients decode the threat environment, including local and relevant threats and priorities, in order to assess the specific needs and requirements of a successful border security structure. Our comprehensive assessments of programs, facilities and personnel, combined with client goals, budget and time frame, can be used to develop an actionable border security plan that meets the client's needs while ensuring continuity with current programs.

SECURITY PERSONNEL

A critical consideration for government, military, and commercial enterprises operating in high-threat and asymmetric areas is access to professional, experienced and robust security and logistics support. Border, infrastructure, and cyber security initiatives require diverse and highly-trained personnel, including border patrol agents, law enforcement, aviation enforcement officers, marine agents, field intelligence officers, agricultural and drug trade specialists, and pilots.

In addition to facilitating security personnel staffing based on client needs, our Security Team provides capacity-building assessments, plans, and implementation for client leadership and staff personnel to ensure that capabilities are brought in-house and in-country for the client's longer-term programs. Our Team's operations, services, security, and staffing capabilities are incorporated into developing comprehensive training for all levels of client staff, law enforcement personnel and other partners.

Through our Spectrum Advantage executive leadership training program, we help government, military and commercial clients prepare their leaders to foster organizational excellence and hone the skills needed for success in today's and tomorrow's global enterprises.

CYBER SECURITY

While our government and corporate clients have diverse cyber security capabilities, protocols, and programs, including highly sensitive security programs and technologies, our Security Team is experienced in helping ensure clients better use and understand best-fit technologies, practices, and protections. While the corporate cyber environment continually faces new and varied technology, regulatory and insurance requirements, we support clients with expert assessment, navigation and implementation. We help clients assess their risk appetite and determine cyber risk management strategies, as well as plan and implement effective preparedness and recover plans.

Just as importantly, we help clients integrate secure technologies, networks, and practices into their border, infrastructure and personnel security operations. Our experience enables us to help clients better understand and meet their security challenges, even when highly sensitive programs and technologies cannot be directly assessed. With better understanding, our clients can determine the additional cyber technologies that may help them best meet their border, infrastructure and personnel security objectives, enabling better investment, construction, and program design.

SECURE INFRASTRUCTURE

Secure infrastructure development spans secure facility construction, the development of water, sanitation and power utilities, and building roads, bridges and airports, often in locations where these are underdeveloped or do not exist. Deep expertise is paramount to accurately assess facility, utility, transportation and personnel needs, and materials, logistics and solutioning required.

We have strong expertise in helping clients better understand, identify and train security personnel capabilities and needs. Likewise, we help clients identify the secure intelligence and communications capabilities needed to meet their infrastructure security goals, including detection and deterrence, and how best to use existing capabilities and make informed decisions about new initiatives.

Border security infrastructure can include field operation equipment, air and marine support, emergency and disaster preparedness, intelligence integration capabilities, and international coordination and participation.

Drawing on our Team's expert understanding and assessment capabilities, we help clients across the full spectrum of mission- and enterprise-oriented design, development, and delivery for logistics, construction, rehabilitation, major transportation infrastructure support, energy and utility support, and program and project management support in challenging and asymmetric environments.

We also support clients in expeditiously and cost-effectively completing all required legal, contractual, and travel documentation, and ensuring compliance with requisite global regulations for secure efforts.
